Allowance of Application # 09/765,768

1. The following communication is in response to applicant's amendment and 1.132 Declaration, received 10-April-2005.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the related prior art, specifically the article authored by Carr et al., entitled *PCS Elite – A Complete Die Compaction Software Package*, the improvement comprising a method for designing a primary geometry for a powder pressing application, wherein the primary geometry is generated from predefined axisymmetric geometric shapes selected from cylinders, cones, toroids, spheres, parallelepipeds, ellipsoids, polyhedrons, and transition radii, and wherein the geometry has a finite element mesh automatically prepared through interfaced software, with material properties and boundary conditions defined through a user interface and subsequent calculation and evaluation of the deformation characteristics of the geometry. This patentable distinction is included in each of the independent claims nos. 1 and 17. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <method for designing a primary geometry for a powder pressing application> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 7, line 2 through page 17, line 2, and Figures 1-5. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
